

PARTNERSHIP PROGRAMME ·
TWENTY KENYAN INSTITUTIONS

KEJA AI

Twenty named partners across banking, mortgage liquidity, payments, data, standards, agencies, development, insurance and community—each with the structural fit, the specific proposal and the opening ask, sequenced so credibility compounds.

1 Partnership Philosophy and Tier Model

Keja AI grows through partnerships before it grows through budget. This document names twenty Kenyan institutions we intend to approach first, and for each one states who they are, why the fit is structural rather than cosmetic, the specific partnership we propose, and the ask that starts the conversation. Every proposal follows the same discipline as the product itself: it must be true, auditable and mutually profitable.

The thesis is that trust infrastructure is a network good: it is valuable to each participant roughly in proportion to how many others participate. A bank gains more from verified listings when the valuers, the developers and the diaspora channels are on the same rail. We therefore prioritise partnerships that compound—each signed institution strengthens the case for the next—and we sequence them so early partners get founder-level access and pricing in exchange for the credibility they lend.

Tier	What it means	What partners contribute	What Keja contributes
Tier 1—Anchor	Co-branded flagship integration	Brand credibility, distribution reach, data or capital	Priority product roadmap, co-branded trust surfaces, exclusive category for a defined period
Tier 2—Revenue	Referral and licensing economics	Qualified customer flow or underwriting volume	Verified pipeline, eligibility tooling, per-deal reporting
Tier 3—Ecos ystem	Data and standards collaboration	Authoritative data, professional standards, research reach	Anonymised market intelligence, joint publications, engineering integration

Table 1.1 — The three partnership tiers.

Outreach follows a fixed sequence: a one-page written proposal (the relevant chapter below), a warm introduction wherever the network allows, a 30-minute working session rather than a pitch, and a scoped 90-day pilot with named success metrics before any commercial commitment. We lead with what the partner can verify—live product, public claims register, working deployments—and we never propose what the engineering cannot yet deliver.

2 Banking and Mortgage Partners

Kenya's mortgage market is small relative to the size of the property market—precisely because origination is expensive when the underlying assets are hard to trust. Keja AI's verified inventory, eligibility tooling and CBK-aligned affordability mathematics give banks a cheaper origination funnel and a cleaner risk view. Six institutions lead the target list.

KCB Bank Kenya

Who they are. Kenya's largest mortgage book and one of its most digitally aggressive banks, with a strong diaspora banking franchise and an established appetite for housing-finance ecosystem plays.

Why Keja fits. KCB's mortgage growth is throttled by origination cost and collateral uncertainty. Keja's Property Passports and valuation bands give loan officers a standardised pre-screening layer, and our diaspora portal reaches exactly the customers KCB's diaspora desks court.

The proposal. A 90-day pilot: Keja surfaces KCB mortgage products inside the Finance product for qualifying users (eligibility pre-matched to KCB criteria), and KCB loan officers receive Keja-verified property files with pre-computed affordability. Co-branded verification badge on partner listings after the pilot converts.

The ask. A named pilot sponsor in mortgage origination and two working sessions with the digital and diaspora teams.

Equity Bank Kenya

Who they are. The region's retail-banking giant, with deep diaspora remittance rails, an extensive branch network and a stated housing-finance agenda under its financial-inclusion franchise.

Why Keja fits. Equity's remittance customers are Keja's diaspora personas—the overlap is nearly total. Remittances that today flow into construction and purchase without inspection could flow through verified, remotely-screened channels.

The proposal. Integration of Keja's diaspora verification journey with Equity's remittance journey: a 'verify before you send' step, co-marketed through diaspora banking channels, plus mortgage referral flow for completed verifications.

The ask. A joint working session with the diaspora banking and partnerships teams, and a scoped pilot agreement for the remittance-verification step.

NCBA Bank Kenya

Who they are. A digitally-led commercial bank with strong asset-finance DNA and an active innovation-partnership practice.

Why Keja fits. NCBA's asset-finance discipline—underwriting against verified collateral—maps directly onto property verification. Their digital-first posture suits a PWA-native integration that requires no branch retooling.

The proposal. Embed Keja verification inside NCBA's property-backed lending workflow: verified collateral files, valuation bands and Trust Scores attached to applications, with per-file licensing rather than platform fees for the pilot.

The ask. A sandbox integration agreement and a joint 90-day success-metric definition (file completeness, time-to-approval, early-default signals).

Co-operative Bank of Kenya

Who they are. The SACCO-movement bank, with unmatched reach into co-operative savings pools that finance much of Kenya's actual housing construction.

Why Keja fits. Co-operative housing finance is relationship-based and collateral-averse for good reason. Keja gives co-operative committees an auditable verification layer for member-funded projects and a tool their members can self-serve.

The proposal. A members' verification programme: Keja Property Passports for co-op-funded developments, group dashboards for committee oversight, and education content co-branded for the movement.

The ask. A pilot with two housing co-operatives in the bank's orbit, sponsored by the co-operative banking division.

Stanbic Bank Kenya

Who they are. The Standard Bank Group's Kenyan franchise—institutional depth, a corporate and affluent client base, and regional reach into the group's wider African network.

Why Keja fits. Stanbic's clients buy property as an asset class, not just shelter; Keja's investor workspaces, yield analytics and institutional portal speak that language. Regional expansion aligns with the group's footprint.

The proposal. A private-client offering: Keja investor dashboards and Deal Analyst screening wrapped for Stanbic wealth clients, with anonymised portfolio-level market intelligence for the bank's research desk.

The ask. A working session with wealth and partnerships, and agreement on a private-client pilot cohort.

HF Group (Housing Finance)

Who they are. Kenya's specialist housing-finance institution, with a developer-lending legacy, a property-development arm and an explicit affordable-housing mission.

Why Keja fits. HF Group's specialist position means every part of Keja's lifecycle map is relevant: developer verification, buyer eligibility, and post-purchase management. The affordable-housing agenda matches Keja's cost-light distribution.

The proposal. A full-lifecycle partnership spanning three fronts: verified profiles for HF-financed developments, embedded mortgage eligibility in Keja Finance under an HF-branded flow, and Keja Manage onboarding for HF's landlord and tenant customers.

The ask. An anchor-partner conversation: category exclusivity in specialist housing finance for a defined period, in exchange for co-branding and joint distribution.

3 Mortgage Liquidity and Payments Infrastructure

Two institutions sit at the plumbing layer of Kenyan housing finance and payments. Partnerships here make every downstream integration cheaper.

Kenya Mortgage Refinance Company (KMRC)

Who they are. The liquidity facility created to grow affordable mortgages by refinancing participating lenders against standardised criteria.

Why Keja fits. KMRC's mandate succeeds when primary lenders originate more, cheaper, better-documented mortgages. Keja's eligibility engine and verification files reduce origination friction exactly where KMRC needs volume: the affordable segment.

The proposal. A pipeline programme: Keja-verified, pre-screened applicant-plus-property files routed to KMRC participating lenders, with Keja's affordability mathematics aligned to KMRC criteria and reporting on conversion by cohort.

The ask. A technical alignment session with the lending-partnerships team and approval to route pilot files to two participating lenders.

Safaricom (M-Pesa)

Who they are. The rails on which Kenyan money moves, with a payments API ecosystem and a distribution reach no financial partner can match.

Why Keja fits. Every Keja transaction surface—listing fees, professional subscriptions, milestone payments, rent collections—runs better on M-Pesa. Conversely, property is one of the largest unmoved categories in the ecosystem's commerce ambitions.

The proposal. Native M-Pesa integration across the Keja product line with a co-marketed 'verified property payments' story: tenants pay verified landlords, buyers pay verified milestones, professionals pay subscriptions—all inside the rails Kenyans already trust.

The ask. A developer-tier API agreement and a joint go-to-market conversation with the payments ecosystem team.

4 Data, Standards and Government Alignment

Keja's verification layer is only as authoritative as its sources. These four collaborations make the Trust Score progressively harder to replicate.

Kenya National Bureau of Statistics (KNBS)

Who they are. The national statistical authority, whose price indices and housing data anchor both policy and private analysis.

Why Keja fits. Keja's yield answers and valuation bands want authoritative macro anchors; KNBS methodology wants ground-truth price observations from live transactions. The exchange is structurally two-way.

The proposal. A data-collaboration memorandum: Keja contributes anonymised listing and transaction-level observations with declared sample sizes; KNBS methodology and indices anchor Keja's market-intelligence outputs with formal citation.

The ask. An exploratory session with the statistics and methodology divisions to scope a mutually auditable exchange.

Ministry of Lands, Public Works, Housing and Urban Development

Who they are. The custodian of land records and the digitisation agenda that will eventually make title verification a government API call.

Why Keja fits. Keja is the consumer-facing layer the digitisation effort needs for its benefits to reach citizens: records without products do not reduce fraud for a buyer holding a phone. Alignment also future-proofs the Trust Score as official data deepens.

The proposal. An alignment framework recognising Keja's verification methodology as a citizen-facing complement to official records, with declared data provenance and graceful degradation when records are pending—never simulated certainty.

The ask. A stakeholder engagement with the lands digitisation programme to define provenance standards and a phased data roadmap.

Institution of Surveyors of Kenya (ISK)

Who they are. The professional body for valuers, land surveyors and property managers—the human infrastructure of Kenyan property due diligence.

Why Keja fits. Keja's verification evidence chain needs licensed valuers and surveyors as the professional layer behind stamps; ISK members need digital demand for exactly those services. The professional panel in Keja Transact is designed as their channel.

The proposal. A professional-panel programme: ISK members listed as Keja-verified service providers, member rates on verification work routed through the platform, and co-developed standards for digital evidence packages.

The ask. A standards co-development session and agreement on a pilot panel of member firms.

5 Agencies, Data Houses and Portals

The incumbents who own inventory and attention. For them, Keja is not a competitor to displace but a trust layer to adopt—provided the economics respect their business model.

Hass Consult

Who they are. The firm behind Kenya's best-known property index, with deep valuation and research credibility and a strong agency arm.

Why Keja fits. Hass's authority is research-led—exactly Keja's own language of sample sizes and methodology. Their index gains live-inventory granularity; Keja's valuations gain the anchor of the market's reference brand.

The proposal. A data-and-brand alliance: co-branded market intelligence combining Hass index methodology with Keja live-inventory analytics, joint quarterly publications, and Hass-verified badges

flowing into Keja's professional panel.

The ask. A research collaboration session and agreement on the first co-branded quarterly release.

Knight Frank Kenya

Who they are. The global property consultancy's Kenyan practice, strong in prime residential, commercial and institutional mandates.

Why Keja fits. Knight Frank's prime-market clients increasingly demand digital evidence trails; Keja's Passport and score surfaces give their mandates a verifiable consumer face without displacing their advisory relationship.

The proposal. A prime-listing verification partnership: Knight Frank Kenya listings carry Keja Property Passports, and Keja's institutional portal surfaces Knight Frank research and mandates to qualified investors.

The ask. A pilot covering one prime residential portfolio, with the residential team.

Pam Golding Properties Kenya

Who they are. The premium residential brand with strong diaspora recognition and an international referral network.

Why Keja fits. Pam Golding's diaspora referrals are the exact persona Keja's diaspora portal serves remotely. Verification closes the distance-trust gap their buyers feel most.

The proposal. A diaspora-facing alliance: co-branded remote-verification journeys for Pam Golding Kenya listings, joint diaspora webinars, and referral flow into Keja's Deal Analyst for their international buyers.

The ask. A joint diaspora-campaign pilot with the international marketing team.

BuyRentKenya

Who they are. Kenya's leading property portal—the incumbent whose listing flywheel Keja complements rather than replaces.

Why Keja fits. Portals monetise breadth; verification depth is a new SKU they can sell to serious listers without slowing their core engine. Keja gains inventory reach; the portal gains a trust product it did not have to build.

The proposal. A verification-layer partnership: BuyRentKenya premium listings opt into Keja verification and carry the Trust Score with a link to the full Passport; revenue shared per verification with the portal's agent network.

The ask. A commercial conversation with the product and partnerships leads, scoped to an opt-in badge pilot.

6 Developer Partners

Developers sell trust above all—off-plan purchases are leaps of faith. Keja's Development Score and verified project profiles convert that faith into evidence, which is why developers are the supply side most motivated to engage.

Superior Homes Kenya

Who they are. The pioneer of gated-community development in Kenya, with a brand built on delivered promises and a legacy buyer base.

Why Keja fits. A developer whose entire brand is 'we delivered what we drew' should own the verified-development story first. Their delivered projects are the perfect training and proof set for the Development Score.

The proposal. An anchor verification case study: Superior Homes' portfolio profiled with Keja Development Scores, delivery-history evidence panels and Passport-backed units, co-marketed as the category's trust benchmark.

The ask. An anchor-developer agreement covering one flagship community, with joint case-study rights.

Optiven Limited

Who they are. The value-added land specialist with an investor-first sales model and a substantial opt-in client base.

Why Keja fits. Optiven's buyers purchase land as an investment, sight-unseen in many cases, on the strength of the company's promises. Keja's yield analytics and verification surfaces are a natural extension of their value-add story.

The proposal. An investor-verification programme: Optiven projects listed with Keja Passports, Investment Score integrations for their client advisors, and joint investor-education content.

The ask. A pilot on two active projects with the sales and marketing leadership.

Karibu Homes

Who they are. The affordable-housing developer whose model—standardised, repeated, finance-ready housing—is the closest Kenya has to production housing.

Why Keja fits. Affordable-housing buyers are the most fraud-sensitive and the least served by professional due diligence; a verified, financing-ready digital pathway is tailor-made for the segment Karibu serves.

The proposal. A buyer-journey partnership: every Karibu unit ships with a Keja Passport, eligibility pre-matching to partner lenders, and a co-branded buyer portal that replaces anxiety with a trackable verification journey.

The ask. A pilot on the next sales release, with success metrics defined jointly with the finance partners involved.

7 Insurance and Community Organisations

Two partnerships complete the trust perimeter: risk transfer for the assets, and distribution through the communities that already move money home.

Britam Kenya

Who they are. The insurance and asset-management group with a home-cover franchise and an institutional investor base.

Why Keja fits. Verified properties are better insurance risks—documented, valued, and title-clean. Conversely, embedded home cover is a natural add-on at the moment of verified purchase, and Britam's asset-management arm is a future Phase-3 data customer.

The proposal. An embedded-insurance programme: Keja-verified transactions offer Britam home cover at the point of trust, with risk-scored pricing informed by verification depth and co-branded protection for Passport holders.

The ask. A product-partnership session with the general insurance and digital teams.

Kenya Diaspora Alliance

Who they are. The umbrella body uniting Kenyan diaspora organisations globally—the trust network through which home-bound money and information actually flows.

Why Keja fits. The Alliance's mandate is protecting diaspora interests at home; Keja's remote verification and Deal Analyst screening are precisely the protection tools its members ask for. Distribution through

chapters beats paid media at diaspora acquisition economics.

The proposal. A community programme: chapter-level webinars on verified home investment, member access to Keja's diaspora portal with prioritised verification slots, and a joint annual 'state of diaspora property trust' report.

The ask. A programme agreement with the secretariat and a first chapter webinar within 60 days.

8 Outreach Sequence and Governance

Twenty targets, one disciplined motion. The sequence is tiered so credibility compounds: standards bodies and data collaborations first (they make every commercial conversation easier), anchor commercial partners second, volume partners as the pilot evidence lands.

Wave	Partners	Timing	Success metric
Wave 1—credibility	KNBS, ISK, Ministry alignment, KMRC, Kenya Diaspora Alliance	Weeks 1-6	Two memoranda or programmes in motion
Wave 2—anchors	HF Group, KCB, Safaricom, Superior Homes, Hass Consult	Weeks 4-12	One signed anchor pilot
Wave 3—volume	Equity, NCBA, Co-op, Stanbic, remaining agencies and developers, Britam, BuyRentKenya	Weeks 10-24	Three active pilots; one converting to commercial terms

Table 8.1 — Three outreach waves with compounding credibility.

Governance is deliberately lightweight: a single partnerships ledger tracking every conversation against the four questions each proposal answers (who, why, what, ask), a weekly review of movement, and a rule that no partnership promise may exceed what the claims register already declares live. Pilots are scoped for ninety days with pre-agreed success metrics and a default-to-sunset clause, so that neither party accumulates zombie collaborations. Every signed partner is announced through the product itself—badges, passports and co-branded surfaces—because the partnership's marketing value should ship as code, not as press releases.
