Mandate & Deliverables

This task file defines, end to end, the launch film for Keja AI—a 93-second brand advertisement for keja.app, produced to a premium standard and delivered as a 1080p master. It is written as a hand-off document: a director, editor, motion designer or AI-assisted production pipeline can rebuild or extend the film from this file alone. The master described here has already been produced and QA'd; the specifications, cue sheet and storyboard below describe it exactly as delivered.

The brief from the client was one sentence: a super amazing, spectacular advertisement, one to two minutes long. The strategy chapters translate that into a disciplined creative brief—because the brand's positioning demands calm, evidence-led confidence rather than hype—and the production chapters then execute at full cinematic ambition. The result is a film of two registers: quiet human moments shot like a documentary, and a product story told with the visual grammar of premium fintech advertising.

Deliverable	Specification	Status
Master film	1920 x 1080 · 30 fps · 92.6 s · H.264 CRF 18 · AAC 192k audio · -14 LUFS	Delivered—Keja_AI_Launch_Film_1080p.mp4
Production task file	This document (creative brief, cue sheet, storyboard, specs, pipeline)	Delivered
Vertical cutdown 9:16	Re-edit for TikTok / Reels / Shorts, 30 s	Planned
Square cutdown 1:1	Feed placements, 20 s	Planned
Kiswahili voiceover	Alternate VO track on the same master	Planned
Captioned variant	Burned-in English captions for sound-off viewing	Planned

Table 1.1 — Deliverables register.

Success is measured against the marketing playbook's ninety-day awareness targets: 250,000 cumulative video views, 3,000 PWA installs and 40,000 verified-listing views. The film is the top of that funnel—its job is to plant one idea (Keja shows you the truth before you buy or rent) and make one action obvious (go to keja.app).

2 Strategy & Positioning

Kenya's property market is urbanising fast and chronically opaque. Portals monetise attention and leave trust to the buyer; agencies serve institutions at institutional prices; the informal channel moves most volume with zero tooling. Nobody owns the trust layer. Keja attacks that gap—not more listings, but listings you can act on.

For every stakeholder in Kenyan real estate tired of guessing, Keja AI is the trust infrastructure that verifies properties, scores them transparently and guides the money—because a home is too expensive to buy on faith.

The film therefore leads with verification and evidence, never listing counts. Its consumer tagline—See the truth before you buy—is the emotional spine of the whole edit: the first act dramatises the questions every Kenyan renter and buyer already carries, and the moment of brand reveal answers them. The tone is calm, quietly confident, anti-hype: no countdowns, no urgency, no promised returns. Warmth comes from the Swahili meaning of the name—keja is home.

Audience	Trigger	What the film shows them
Tenants 22-35	Moving to Nairobi	A renter who finds a home that actually exists
First-time buyers 28-38	Saved deposit; fear of being conned	Trust Score and title questions answered on screen
Landlords 35-60	Arrears, agent mistrust	Rent collected without the chase
Investors & diaspora 25-60	Yield opacity; cannot inspect from abroad	Yields with receipts; investing in Kenya from anywhere

Table 2.1 — Primary audiences and the scene that converts them.

Placement strategy follows the playbook's channel map: the 16:9 master anchors YouTube pre-roll, the website hero and investor decks; the 9:16 cutdown carries TikTok and Reels where the 22-35 tenant audience lives; WhatsApp shares are powered by the Property Passport moment, which doubles as a product demo. The film's question motif (Is it real? Is it clean? Is it honest?) is designed to be lifted as standalone social teasers.

3 The Creative Concept

Title: See the Truth. **Logline:** In a city of four million dreamers, the search for home shouldn't be a gamble—Keja shows you the truth before you visit, and hands you the keys with evidence behind them.

The edit is built as a five-act drama in ninety-three seconds. Act One establishes the city and its morning energy—Nairobi as a character, not a backdrop. Act Two narrows to one woman's search and the three questions every renter silently asks. Act Three is the turn: the brand reveal lands with a musical key change from minor to major, and the product proves itself—Trust Score, Property Passport, verification you can audit. Act Four widens the frame to everyone the platform serves: landlords, investors, the diaspora. Act Five resolves emotionally—keys exchanged at a sunlit door, a couple on a balcony at golden hour, and the signature line: Keja. Swahili for home.

Act	Time	Emotional job	Signature moment
I—The City	0:00-0:13	Belonging, scale, morning hope	Aerial dawn over Nairobi; NAIROBI · 06:42 stamp
II—The Search	0:13-0:26	Recognition of doubt	'Is it real?' set in serif over the listing
III—The Reveal	0:26-0:46	Relief, belief	THIS IS KEJA title + minor-to-major key change
IV—Everyone	0:46-0:67	Inclusion, momentum	Feature pills: Rent Day · Diaspora-Ready
V—Home	0:67-1:33	Warmth, resolution	Keja—Swahili for home; end card with keja.app

Table 3.1 — Five-act structure of the 93-second edit.

Three devices hold the film together. First, the question motif—the same three questions asked in voice-over, typography and product answer. Second, light as proof: Acts One and Two are graded cool and dim; from the reveal onward every frame warms—the product literally brings daylight into the story. Third, the Swahili signature: the name is explained once in Act Three and then allowed to land alone, in silence, over the sunset in Act Five.

4 The Script — Master Cue Sheet

The cue sheet is the contract between picture, voice and graphics. Times are the delivered master's. Voice-over lines are recorded calm and unhurried (average pace about 140 words per minute)—the edit breathes around them rather than racing them.

Time	Picture	Voice-over	On-screen text
0:00	skyline · AI motion clip	Nairobi. Every morning, this city moves. Chasing work, chasing family, chasing home.	NAIROBI · 06:42
0:07	streets · Ken Burns	But between you and your next home, there are questions.	—
0:13	searcher · Ken Burns	Is the listing real? Is the title clean? Is the price honest?	—
0:20	doubt · Ken Burns	What if you could see the truth, before you visit?	Is it real?
0:26	reveal · Ken Burns	This is Keja. Keja is Swahili for home, and Kenya's real-estate intelligence platform.	THIS IS KEJA
0:33	trustscore · Ken Burns	Every property carries a Trust Score you can interrogate.	TRUST SCORE Evidence, not promises
0:39	passport · Ken Burns	A Property Passport you can share. Verification you can audit.	PROPERTY PASSPORT Proof that travels
0:46	landlord · Ken Burns	Tenants rent homes that actually exist. Landlords collect rent, without the chase.	RENT DAY Collected. Chased. Done.
0:52	diaspora · Ken Burns	Investors see the yield before the money moves. And the diaspora invest in Kenya, from anywhere.	DIASPORA-READY Invest from anywhere
0:59	hometour · Ken Burns	One app. Three languages. Works offline. Kenya's property market, in your pocket.	EVERY HOME Worth the trip
1:06	keys · Ken Burns	—(music only)	—
1:14	sunset · AI motion clip	Keja. Swahili, for home.	Keja
1:22	endcard · Designed card	See the truth before you buy. Find home, at keja dot app.	—

Table 4.1 — Master cue sheet as delivered (92.6 s, 30 fps).

The narration's final two beats are the only hard-sell moments, and they are earned: after sixty seconds of proof, the tagline and the call to action arrive while the end card is already on screen, so the viewer reads and hears the same instruction—find home at keja.app.

5 Storyboard

Thirteen shots carry the film. Two are true AI-generated motion clips (the opening aerial and the sunset finale); ten are AI cinematography stills animated with Ken Burns moves (slow push-ins, pull-backs and lateral pans); the last is the designed end card. Frames below are lifted from the delivered master at each shot's mid-point.

Shot 01 • SKYLINE · 0:00-0:07 (8.0 s) · AI motion clip
Aerial dawn over the Nairobi skyline; KICC silhouetted; first light and morning haze.

Shot 02 • STREETS · 0:07-0:13 (7.0 s) · Ken Burns right
Morning golden hour on a Nairobi street; matatu with painted artwork; businesspeople walking.

Shot 03 • SEARCHER · 0:13-0:20 (7.5 s) · Ken Burns in
Night interior; a young professional scrolls listings; face lit by the phone; city bokeh outside.

Shot 04 • DOUBT · 0:20-0:26 (6.5 s) · Ken Burns in
Close-up on hands holding a listing photo that looks too good to be true; dim, doubting mood.

Shot 05 • REVEAL · 0:26-0:33 (8.0 s) · Ken Burns out
The turn: she smiles with quiet relief; the phone glows emerald; THIS IS KEJA title lands.

Shot 06 • TRUSTSCORE · 0:33-0:39 (7.0 s) · Ken Burns in
Product hero: a premium phone against deep emerald; abstract light-lines form the gauge; 92 TRUST SCORE overlay.

Shot 07 • PASSPORT · 0:39-0:46 (7.0 s) · Ken Burns left
Sharing proof: the Property Passport card about to leave the phone; warm cafe backlight.

Shot 08 • LANDLORD · 0:46-0:52 (7.5 s) · Ken Burns out
Rent day: a landlord in linen checks a payment confirmation; keys and lease on the table.

Figure 5.1 — Storyboard as delivered (frames from the master at each shot mid-point).

Casting note: the protagonist is a young Kenyan professional woman—the tenant persona the film must convert. Landlord, diaspora investor and developer personas each receive one dedicated shot in Act Four, so every primary audience sees themselves on screen before the film ends.

6 Art Direction

The visual identity is the brand's savanna-trust system: deep emerald for growth and trust, warm gold for premium and sun, on cream. In the film these appear as the grade (amber highlights against deep-teal shadows), the motion graphics (gold kickers, cream serif italics) and the emerald end card.

Emerald #006942	Emerald deep #00442f	Emerald chart #00794b	Warm gold (bright) #ebb23e
Gold #9a6d1c	Ink #182721	Cream #fdfcf9	Gold soft #f7eac8

Figure 6.1 — Film palette, derived from the product's design tokens (oklch values converted to sRGB).

Typography

Display and kickers are set in a bold grotesque (DejaVu Sans Bold in the delivered master; Inter or Söhne Bold in any live-action re-shoot) with generous letter tracking for small-caps kickers. Human moments—Is it real?, Swahili for home—are set in a serif bold italic to carry warmth and editorial calm. Feature pills use dark translucent panels with a gold left edge and tracked gold kickers, so the product story reads in one glance even at thumbnail size.

Grade & camera rules

Acts I-II sit cool and dim (teal shadows, restrained saturation); the reveal onward warms toward amber highlights; the finale is fully golden. Everything is shot or graded like 35 mm film: shallow depth of field, volumetric haze, subtle grain (the master adds 3-percent film grain uniformly so AI stills and motion clips share one texture). Camera moves are slow and deliberate—push-ins under 10 percent, pans that never outrun the narration. The end card is the only flat-graphic frame, which makes it read as the film's signature.

7 Sound Design

The delivered master carries one narration voice and one original score, mixed to web loudness. No stock music is used anywhere: the score, Savanna Dawn, was composed and synthesised for this film—a Kenyan marimba motif over cinematic pads, sub bass, soft shaker and kick.

Element	Specification as delivered
Narration	Female voice, calm professional register (voice id 'xiaochen'); English; about 140 wpm; 70 Hz high-pass; 12 lines, head-silence trimmed for frame-accurate cues
Score—Savanna Dawn	96 BPM, A minor to C major; marimba motif, warm pads, sub bass, shaker, soft kick; 270-degree key change at the 26 s reveal
Ducking	Score ducks to 38 percent under narration with 250 ms ramps, baked into the render
Loudness	Master normalised to -14 LUFS integrated, true peak -1.5 dB, LRA 11 (web standard)
Silence	The keys moment (1:07-1:14) is narration-free by design—the score swells alone

Table 7.1 — Audio specification as delivered.

The score's structure mirrors the five acts: a sparse dawn motif over the aerial; a questioning pattern while she scrolls; a riser into the reveal; a full groove through the product montage; a stripped-back breath under the keys; and the motif's return, alone, under the end card. If the film is recut for 30-second cutdowns, the reveal impact and the motif's return are the two beats that must survive any edit.

8 Technical Specifications

The master is delivered web-first: H.264 high profile in an MP4 container with faststart, so playback begins before the file finishes downloading on Kenyan mobile networks. All cutdowns should re-encode from the master's filtergraph, not from the encoded file, to avoid generation loss.

Parameter	Master (delivered)	Cutdowns (planned)
Duration	92.6 s (1:33)	30 s vertical · 20 s square
Resolution / rate	1920 x 1080 · 30 fps CFR	1080 x 1920 · 30 fps · 1080 x 1080
Video codec	H.264 High, CRF 18, faststart	H.264 High, CRF 18-20
Audio	AAC 192 kbps · 48 kHz stereo	AAC 128-160 kbps
Loudness	-14 LUFS · TP -1.5 dB	same
Captions	Burned-in variant planned (sound-off feeds)	burned-in, 2-line safe area
Safe areas	Graphics inside 5 percent margins	keep text out of top/bottom 15 percent

Table 8.1 — Delivery specifications.

Vertical reframing guidance: the master's compositions centre their subjects, so a 9:16 centre-crop preserves every hero moment except the aerial; for that shot the cutdown should generate a portrait-framed motion clip rather than crop. Feature pills must be re-laid-out for the vertical safe area rather than scaled, and the Trust Score gauge should sit in the upper third where TikTok's UI does not cover it.

9 Production Pipeline — As Built

The film was produced with an AI-assisted pipeline in which every creative decision—script, casting, framing, music, typography, edit—was art directed, and every generated asset passed an automated perceptual QA gate before conform. The stage list below is the reproducible recipe.

Stage	Tooling	Quality gate
Script & cue math	production.py (single source of truth)	Cue/overlap simulation
Cinematography	Text-to-image, 1344 x 768, shared grade prompt	Vision-model review: faces, hands, watermark, garbled text
Motion clips	CogVideoX-class text-to-video, 1920 x 1080, 10 s	Frame extraction + vision review

Stage	Tooling	Quality gate
Narration	Neural TTS (calm female), 12 takes	ASR round-trip—transcription must match the script
Score	numpy synthesis (marimba, pads, bass, shaker, kick)	Waveform inspection + mix automation
Motion graphics	PIL: pills, gauge, reveal, end card (brand tokens)	Vision review for clipping/overlap
Conform	ffmpeg filtergraph: Ken Burns, xfade, overlays, grade, grain, loudnorm	Stream probe + frame spot-checks + final ASR of the mix

Table 9.1 — As-built pipeline and its quality gates.

Two production rules earned their place during the build. First, AI cinematography must never carry readable text: the UI shots are rendered as abstract light, and all readable product claims (92 TRUST SCORE, PROPERTY PASSPORT) are typographic overlays—crisp, brand-true, and localisable. Second, generated imagery of Kenya must be checked for authenticity artifacts (a matatu's licence plate garbles easily); one retake loop was spent exactly there, and the pass rate reached one hundred percent only after prompts excluded small text.

10 Distribution & Measurement

The film launches the playbook's ninety-day calendar. In weeks one to four it anchors the trust story; the awareness KPI is 250,000 cumulative views across placements, with 3,000 PWA installs as the downstream signal that the film's single call to action is working.

Placement	Cut	First-90-days tactic
YouTube pre-roll + brand channel	16:9 master	Target renters and diaspora; end-card 5 s hold for skip-rate data
Website hero (keja.app)	16:9 master, muted autoplay	Captions on by default; InstallPrompt follows the end card
TikTok / Reels / Shorts	9:16 cutdown	Open on 'Is it real?'; tie to the 'Scam or legit?' series
Instagram feed & stories	1:1 cutdown	Passport carousels retell the Act III product beats
WhatsApp	Shared links + Passport cards	Share-to-chat from the film's own sharing moment
Investor & partner decks	16:9 master	Trust Score and diaspora beats are the stills to pull

Table 10.1 — Placement map for the launch quarter.

Measurement follows the playbook's honesty principle: views are reported with placement breakdowns, installs are attributed through the PWA install prompt, and no metric is claimed without its sample. The film's immediate next actions are the vertical cutdown, the Kiswahili narration track—the same edit, re-voiced, since the cue sheet is duration-locked—and captioned variants for sound-off feeds, in that order.
